EDUCATION

MCC, University of Mumbai

BSc in Information Technology:- CGPA - 7.37

Mumbai, India

2022 – 2025

GVM College

High School (HSC Science):- 65%

Mumbai, India

2020 – 2022

PROJECTS

Federal Registry RAG Agentic System | *Python, Groq LLM, MySQL, Streamlit, Asyncio* [[Project Link](#)]

- Built a full-stack RAG system to query US Federal Registry using Groq's LLM and async pipelines.
- Integrated Streamlit UI, MySQL backend, and daily updates via the Federal Registry API.
- Implemented tool calling, raw SQL querying, and an agentic architecture for real-time retrieval.

ArtCycle | *Python, Tensorflow, Numpy, Matplotlib, Shell* [[Project Link](#)]

- Built a CycleGAN-based deep learning model for artistic style transfer and deployed it via Streamlit.
- Integrated pretrained TensorFlow models for real-time image conversion on Streamlit Cloud.
- Optimized training pipelines using cycle/identity loss and automated dataset loading via Kaggle API.

Brain Tumor Classification App | *Python, TensorFlow, Streamlit, CNN, PIL* [[Project Link](#)]

- Created a Streamlit app using a CNN model to classify MRI brain scans into four tumor categories.
- Implemented grayscale preprocessing, prediction probabilities, and data augmentation pipelines.
- Deployed model with TensorFlow on Hugging Face Spaces for public access and real-time inference.

Student Performance Analysis and Prediction | *Python, Scikit-learn, XGBoost, Plotly, Streamlit* [[Project Link](#)]

- Developed a Streamlit app with dashboards for academic performance prediction using ML models.
- Enabled role-based access, trend analysis, and report generation with secure MongoDB storage.
- Used pretrained models to predict SGPA, marks, and percent using XGBoost and Scikit-learn.

EXPERIENCE

Techathon

Mulund College of Commerce

February 2025

Mumbai, India

- Built and trained machine learning models to predict equipment failures using sensor data and historical maintenance records.
- Performed data preprocessing and feature engineering to improve prediction accuracy.
- Optimized model performance through hyperparameter tuning and evaluation metrics like precision and recall.
- Integrated machine learning models into backend (Flask/FastAPI) for real-time predictive maintenance.

OPEN SOURCE CONTRIBUTION

Universal-Box

2024

Contributor (Data Science Template)

- * Developed and added a Data Science template to Universal-Box to streamline data science project setup.
- * Created an easy-to-use starter template including configurations for common data science tools (e.g., Jupyter, pandas, scikit-learn).
- * Integrated sample workflows and notebook structures into the template for quick project initialization.
- * Collaborated with other developers to ensure the template aligns with best practices for data science projects.

TECHNICAL SKILLS

Languages: Python, SQL

Frameworks: TensorFlow, Flask, FastAPI

Developer Tools: Docker, Linux, Git, GitHub, VS Code, Jupyter lab, PyCharm

Libraries: Scikit-learn, pandas, NumPy, Matplotlib, Seaborn, Plotly
